

Pandas

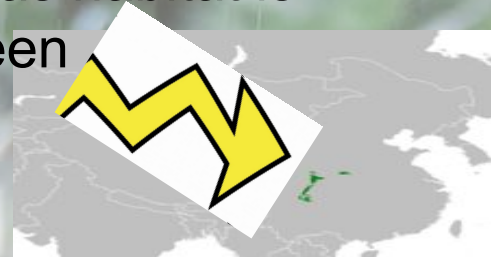

By :Potatoes

Pandas habitat

- Pandas live in southwest China
- Their habitat does not have much space
- They live in moist and bamboo forests
- Now their habitat because of the Sichuan earthquake which destroyed $\frac{3}{4}$ of space in 2008 and bamboo is cut
- There are 1000 to 3000 pandas that inhabit this habitat.

Pandas habitat is
in green

Food

- Panda's eat most bamboo
- They sometimes eat the other plants
- They eat 26 - 48 kg of bamboo per day
- Panda eat very fast and they eat 12 hours a day
- Pandas can also eat some meat
- The false thumbs allow them to pick and hold the bamboo stems

Why pandas are in danger

- Their habitat is being smaller and smaller
- We cut down bambou
- Earthquakes made bambou go down and they could injure pandas
- We hunted pandas

How can we prevent pandas from being extinct?

- We could plant more bambous
- We can stop hunting pandas
- We could find hazard for earthquakes in their habitats and nearby cities

Population

- There are only 1,864 giant pandas that live in the wild.
- because of deforestation panda population might decrease but right now it is increasing
